The Bakken Oil Formation:  
Welcome to the Next Oil Boom

June 22nd, 2008

The U.S. Geological Survey just published its official results of a groundbreaking study.

Its report confirmed a massive oil reserve in an area the locals have nicknamed the "Bakken," which stretches across North Dakota, Montana and southeastern Saskatchewan.

The new USGS study estimates a whopping 3.65 billion barrels of oil in the Bakken... but here's what they didn't mention:

The reported 3.65 billion barrels of oil mean estimate is for 'undiscovered' oil only, and doesn't include known oil, such as reserves.

In fact, the study reports a 25-fold increase in the amount of oil that can be recovered... compared to the agency's estimate back in 1995.

Discovered over 50 years ago, the Bakken deposit--once impossible to extract--is now being hailed as the single largest oil find in US history.

That's because, today, thanks to breakthrough drilling techniques like horizontal drilling, the Bakken's oil shales can be extracted relatively cheaply.

When that happens, this light, sweet oil will cost Americans just \$16 per barrel!

The next oil boom is already upon us.

And, considering that oil prices are likely to remain above \$100 a barrel, the time for shock is over. Investors are now faced with an unprecedented opportunity to play the U.S. and Canada's new hottest oil stocks... several of which are poised to make 300% gains during 2008.

To get the full details on the Bakken and the leading stocks behind it--before the story goes mainstream--simply sign up for the free Energy and Capital e-Letter, a daily advisory on the fast-moving profits in the energy stock sector, written and edited by energy and natural resources investing experts Chris Nelder and Keith Kohl.

Learn how to get your free copy of the new book, Profit from the Peak (featured on CNBC and Fox News), after signing up for the Energy & Capital e-Letter.

After getting your Bakken Oil report, you'll begin receiving the Energy and Capital e-Letter, delivered to your inbox five times a week. In each issue, you'll discover the foresight and vision to exploit the stock and investment opportunities of the new energy economy.
